

MUHAMMAD AFZAAL HASSAN

Full-Stack Web Developer · MERN & PERN Stack · AI SaaS Builder · REST APIs

✉ muhammadaafzaalhassan51@gmail.com | ☎ +92 343 833 8266 | [linkedin.com/in/afzaalhassan](https://www.linkedin.com/in/afzaalhassan) | github.com/Afzaal162 | afzaal-portfolio-one.vercel.app

PROFESSIONAL SUMMARY

Results-driven Full-Stack Web Developer with proven experience architecting and deploying production-grade web applications using the MERN and PERN stacks. Independently built and shipped two AI SaaS platforms from concept to live production. Skilled in responsive React.js frontends, scalable Node.js/Express.js REST APIs, PostgreSQL and MongoDB databases, API integration, Git version control, and cross-browser responsive design. Passionate about writing clean, efficient, maintainable code and delivering real products that solve real problems.

TECHNICAL SKILLS

Frontend	HTML5, CSS3, JavaScript (ES6+), React.js, Next.js, Tailwind CSS, Bootstrap, Vite, Responsive Design, Cross-Browser Compatibility
Backend	Node.js, Express.js, RESTful API Design, JWT Authentication, Bcrypt, Nodemailer, Middleware Architecture, MVC Pattern
Databases	PostgreSQL (Neon Serverless), MongoDB (Mongoose ODM), MySQL, Prisma ORM, SQL & NoSQL Query Optimization, Schema Design
Auth & Cloud	Clerk (Auth + Subscription Billing), JWT, RBAC, Cloudinary, Vercel, GitHub Actions, CI/CD, npm, Postman, VS Code
AI & APIs	Stability AI (SDXL), Fal.ai (Stable Video), OpenAI API, Generative AI Integration, Third-Party API Integration, Webhook Handling
Core CS	OOP, Data Structures & Algorithms, System Design, REST Architecture, Debugging, Performance Optimization, Sentry Monitoring

PROFESSIONAL EXPERIENCE

Full-Stack Web Developer · Eziline Software House

Feb 2026 – Apr 2026

Rawalpindi, Pakistan

- Developed, maintained, and optimized modules for I-Portal — an enterprise employee management system handling HR workflows, attendance tracking, staff records, and role-based access control (RBAC) at organizational scale.
- Designed and integrated RESTful API endpoints; managed structured PostgreSQL/MySQL schemas for high-volume employee data with performance-optimized queries.
- Applied MVC architecture and OOP principles to write clean, scalable, maintainable code with reusable service layers and proper separation of concerns.
- Implemented multi-role authentication with secure role-based access control (RBAC) across admin and employee-facing portal views.
- Debugged and optimized backend systems, REST API endpoints, and frontend views — improving performance, reliability, and response times.

Full-Stack Developer (MERN) · Ezitech Institute

Oct 2025 – Jan 2026

Rawalpindi, Pakistan

- Built production-grade full-stack web applications using the MERN stack — implementing OOP principles across React.js frontends, Express.js REST APIs, and MongoDB data models.
- Engineered secure authentication systems with JWT authorization, bcrypt password hashing, and email OTP verification via Nodemailer; implemented protected route management.
- Developed a complete blogging platform with CRUD operations, user profile management, nested commenting, Cloudinary image uploads, and Vercel production deployment.
- Applied data structures and algorithms to optimize backend logic and enhance system performance across production builds.

KEY PROJECTS

Genesis — AI-Powered UGC Studio | [Live Demo](#) | [GitHub](#)

- Architected and solo-shipped a full-stack AI SaaS platform that generates photorealistic UGC product images using Stability AI (SDXL) and converts them to social media videos using Fal.ai Stable Video Diffusion.
- Built a complete credits billing system, async background video processing with real-time polling, community gallery, and decoupled frontend/backend architecture — deployed on Vercel.
- Integrated Clerk for end-to-end authentication and session management, Cloudinary for AI-processed media storage, and Neon PostgreSQL with Prisma ORM for persistent data management.

QuickAI — AI-Powered SaaS Platform | [Live Demo](#) | [GitHub](#)

- Built a full-stack AI SaaS application solo featuring an AI article writer, blog title generator, image background remover, user dashboard, and community gallery with like/unlike functionality.
- Integrated Clerk for authentication, session management, and subscription billing (Free vs Premium plans) with protected route enforcement across frontend and backend.
- Resolved complex production challenges including CORS preflight failures, Vercel serverless cold-start behavior, and multi-service environment variable management.

Full-Stack Blogging Platform | [MongoDB](#) · [Express.js](#) · [React.js](#) · [Node.js](#) · [JWT](#) · [Bcrypt](#) · [Cloudinary](#) · [Context API](#) · [Vercel](#)

- Built a complete blogging application with JWT-secured authentication, post CRUD operations, nested commenting, user profile management, and Cloudinary image integration.
- Managed global auth state with React Context API; deployed on Vercel with production-grade CI/CD pipeline via GitHub. Implemented Markdown-supported rich text editing.

EDUCATION

Bachelor of Science in Computer Science

Nov 2020 – Nov 2024

Government College University, Faisalabad

Relevant Coursework: Data Structures & Algorithms, Database Management Systems (SQL/NoSQL), Web Technologies, OOP, Software Engineering, Operating Systems

CERTIFICATIONS

- What Is Generative AI? — LinkedIn Learning | Foundational understanding of AI/ML concepts and Large Language Models (LLMs)
- Introduction to Microsoft Excel — LinkedIn Learning
